PROFESSIONAL PROFILE

Data Scientist and Analyst with strong expertise in data preprocessing, statistical modeling, machine learning, and AI system development across healthcare, logistics, finance, and research sectors. Founder of TaiStat, where I develop AI-powered analytics platforms including YodaAI, delivering predictive insights and automated decision-support solutions. Skilled in Python, R, SQL, Excel, Tableau, and Power BI, with proven ability to transform complex datasets into actionable insights that improve operational efficiency and strategic decision-making.

Experienced in analyzing large-scale telematics and operational data, developing predictive models, and building real-time analytics dashboards for organizational use. Proficient in deploying Machine Learning and AI solutions using Docker, Streamlit, Hugging Face, and cloud platforms including AWS and Azure, enabling scalable and production-ready systems. Passionate about leveraging data, machine learning, and AI to solve real-world problems, optimize performance, and drive innovation through intelligent, data-driven solutions.

EXPERIENCE

DATA SCIENTIST, CONTROLTECH LIMITED, NAIROBI

January 2026 – Present

As a Data Scientist at ControlTech Limited, I analyze large-scale logistics and telematics data to improve fleet performance, driver safety, and operational efficiency. My role focuses on developing data-driven solutions that monitor vehicle activity, evaluate driver behavior, and support intelligent fleet management. By leveraging advanced analytics and visualization tools, I help the organization identify inefficiencies, reduce operational risks, and enhance decision-making through actionable insights.

Key Responsibilities:

- Analyze telematics and logistics data using Python, SQL, and Power BI to monitor fleet performance and operational efficiency.
- Develop analytics models to assess driver behavior, including speeding, harsh braking, excessive idling, route deviations, and unsafe driving patterns.
- Build interactive dashboards and automated reporting systems in Power BI, enabling real-time monitoring of fleet operations.
- Perform data cleaning, preprocessing, and transformation of large telematics datasets to ensure accuracy and reliability.
- Detect anomalies such as fuel misuse, unusual vehicle activity, and operational inefficiencies using statistical and analytical methods.
- Generate detailed reports and present insights to management, supporting data-driven decisions and operational improvements.
- Support development of intelligent fleet monitoring systems and predictive analytics solutions for logistics optimization.

FOUNDER & LEAD DATA SCIENTIST, TAISTAT FIRM

June 2025 – Present

As the Founder and Lead Data Scientist at TaiStat, I established a data science and AI firm focused on developing intelligent analytics platforms and providing data-driven solutions to organizations across healthcare, logistics, research, and business sectors. I lead the design, development, and deployment of AI systems, predictive models, and analytics dashboards that enable organizations to make informed strategic and operational decisions. I also spearheaded the development of YodaAI, an AI-powered analytics and forecasting platform designed to deliver predictive insights and automate data analysis workflows.

Key Responsibilities:

- Founded and built TaiStat, a data science and AI company delivering analytics, forecasting, and AI-powered decision support solutions.
- Designed and developed YodaAI, an AI-driven platform for predictive analytics, data analysis automation, and intelligent reporting.
- Analyzed large and complex organizational datasets using Python, SQL, and Power BI, generating actionable insights to improve performance and operational efficiency.
- Built interactive dashboards and automated reporting systems using Power BI, Tableau, and Streamlit, enabling real-time data monitoring and executive decision-making.
- Developed and deployed machine learning models for forecasting, classification, and risk prediction across healthcare, business, and operational use cases.
- Delivered data analytics consulting services to organizations, transforming raw data into clear, actionable reports and strategic recommendations.
- Architected scalable AI and analytics solutions using modern tools including Docker, Hugging Face, AWS, and cloud infrastructure.
- Led end-to-end project lifecycle including data collection, preprocessing, model development, deployment, and stakeholder reporting.

FREELANCE DATA SCIENTIST & ANALYST, REMOTE

AUG 2023 – Present

As a freelance Data Scientist and Analyst, I collaborate with international clients and postgraduate students to deliver data-driven solutions, statistical analysis, and machine learning model development. My role involves guiding learners, designing predictive models, deploying applications, and creating interactive dashboards that transform raw data into actionable insights. I also build point-of-sale systems for retail stores and Hotels. Integrating advanced analytics with practical applications, I help clients make informed decisions and build scalable data solutions.

Key Responsibilities:

- Tutoring U.S. and U.K. students in Machine Learning, Python, and Statistical Methods, delivering practical, hands-on learning support.
- Building and deploying ML models using Streamlit, Docker, Hugging Face, and AWS to solve real-world client problems (Mobile Applications).
- Developing and integrating point-of-sale (POS) systems for retail stores and hotels, embedding advanced analytics to drive informed decision-making and scalable data solutions.
- Conducting data analysis, statistical research and marketing research with Python, R, Stata, and SPSS, generating actionable insights for academic and business projects.
- Designing and developing interactive dashboards in Tableau, Power BI, and Jupyter Notebooks, improving reporting and data storytelling.
- Supporting clients with SQL (PostgreSQL, MySQL) data extraction and transformation, ensuring accuracy and efficiency in reporting.

DATA ANALYST INTERN

As a Data Analyst Intern within the hospital's Research and Data Unit, I supported the collection, management, and analysis of large-scale healthcare datasets to drive evidence-based decision-making. My work involved designing data tools, cleaning and processing patient data, and generating analytical insights that informed clinical research, organizational planning, and operational efficiency. I also actively participated in Monitoring & Evaluation (M&E) activities, where I helped design performance frameworks and set Key Performance Indicators (KPIs) for departmental heads, strengthening accountability and outcome tracking within the hospital.

Key Responsibilities:

- Contributed to M&E processes, assisting in the design of performance measurement frameworks and setting KPIs for departmental heads to monitor efficiency and outcomes.
- Collected and managed hospital data using Kobo Toolbox, ensuring accuracy and completeness of datasets.
- Conducted data cleaning, preprocessing, and statistical analysis using SPSS, SQL, Python, Excel, and Stata to generate actionable insights.
- Designed and implemented data collection tools (EpiData), and performed accurate data entry in EpiData and Excel for efficient record management.
- Prepared comprehensive reports and professional presentations (PowerPoint) to communicate findings to technical and non-technical stakeholders.
- Developed interactive data visualizations and dashboards using Power BI and Tableau, improving decision-making and reporting efficiency.
- Applied machine learning techniques in Python for predictive modeling and advanced analytical tasks.

EDUCATION

BSC STATISTICS**JOMO KENYATTA UNIVERSITY OF AGRICULTURE AND TECHNOLOGY**

I pursued a degree in Statistics, where I developed a strong foundation in statistical methods, probability, regression analysis, and econometrics. My studies emphasized applying quantitative techniques to real-world problems, enabling me to design surveys, analyze data, and generate insights that support evidence-based decision-making.

DATA SCIENCE**MORINGA SCHOOL**

I completed an intensive program in Data Science with a focus on Python, SQL, and machine learning. The training was highly practical, covering data preprocessing, predictive modeling, visualization, and deployment of analytical solutions. I successfully executed projects that demonstrated my ability to transform raw data into actionable insights.

Certificate in Data Analysis (SPSS) - JKUAT

This certification enhanced my skills in data collection, management, and statistical analysis using SPSS. I gained practical experience in designing survey tools, cleaning datasets, and performing both descriptive and inferential analysis to support research and reporting.

SKILLS

- **Programming & Analysis:** Python, R, SQL (PostgreSQL, MySQL), Stata, SPSS, SAS, Excel
 - **Data Visualization:** Tableau, Power BI, Matplotlib, R Shiny, Jupyter Notebooks
 - **Machine Learning & AI:** Scikit-Learn, TensorFlow, PyTorch, Hugging Face
 - **Cloud & DevOps:** AWS, Azure, Docker, Kubernetes, Streamlit, Render
 - **Data Management:** Kobo Toolbox, EpiData, Data Annotation & Governance
-
